

# A Helping Hand

Antech take their business to the next level with managed IT services partner.

## Background:

Founded in 1987, ANTECH is an independent provider of radiation measurement equipment, measurement services and technical expertise to the nuclear industry.

## The Challenge:

Antech identified a need to update elements of their IT estate and enlist a partner to deliver managed IT support for the business in order to improve performance. Like many other organisations, they faced the challenge of legacy infrastructure combined with ad-hoc arrangements for IT support delivered on a best endeavors basis by internal staff.

### Solution:

It was imperative that the recommended solution would be sustainable and provide longevity, as well as being stable, secure and the right specification to meet the needs to the Antech team. Through detailed conversations with the team, it was agreed that the best fit for Antech would be managed IT support from STL during business hours to help maintain their servers and workstations, the provision of a cyber security solution as well as resiliency through data back-up. To allow for workforce flexibility and cost management, STL also helped with the subscription based procurement of hardware such as laptops, PCs, docking stations and new screens.

**“I have improved ANTECH operationally by derisking IT though working with Simon and Adam along with the team. STL appears to take every comment or request seriously, and works diligently to be responsive and flexible.”**

*Alan Lewis, Director - Antech.*
