

Getting the right infrastructure to accommodate the digital age

Cherwell College Oxford modernises its infrastructure to improve market attractiveness

Background:

Cherwell College Oxford is an independent co-educational boarding and day school located at the centre of Oxford, for students aged between 12 and 19 years of age.

The Challenge:

Attracting both international and domestic boarding students, Cherwell College offers purpose-built student residential accommodation. Student feedback indicated that improvements could be made to the connectivity being provided so as to accommodate and keep pace with their increased dependency and expectancy of that connection for their multiple smart devices (laptop, phone, smart TV, gaming etc).

Solution:

STL worked with Cherwell College to install and upgrade their connectivity, replacing the legacy broadband with super-fast and reliable Wifi.

This not only ensured that the students received the connectivity they expected and a secure environment to learn online, but allowed the college to future proof their business.

“It was important to us to listen to what our students needed and make sure as a business we were modernising our infrastructure to remain attractive and competitive. As STL supply and manage the connectivity, it allows us to focus our time on doing what we do best whilst providing us with the option to scale as we grow—really building longevity in the digital age.”

Stephen Clarke – Principal
