

Using technology to underpin business efficiency

Greene's Tutorial College
drive smarter business
results with their connected
business

Background:

Greene's Tutorial College is an independent university-preparatory school and tutorial college in Oxford, which specialises in providing bespoke one-to-one tuition for students of any age, though particularly 16-18 year olds.

The Challenge:

IT and communications play a key role for Greene's Tutorial College as it enables many parts of their business – the facilitation of online learning, communication between multiple domestic and international sites and provision of connectivity to students and staff for their many devices. They were also looking for help in managing their IT support – providing them with the peace of mind that this would be taken care of, leaving them to focus on their core roles.

Solution:

An end to end, complete solution was required to deliver the technology infrastructure needed to modernise their business.

This encompassed installing fast, resilient and dedicated connectivity, upgrading their business phone system, ensuring security through video entry systems and also taking on the role and management of their IT support function.

“It was clear that we needed a technology refresh throughout the business in order to not only keep up and keep pace with our ever-changing world, but also to drive efficiencies and cost savings. STL provided us with a best in class and personalised solution that would deliver against both of these objectives.”

Alex Gray – Chief Executive Greene’s Tutorial College
